INTERNSHIPS

Full Stack Intern — Better Tomorrow

Jun 2023 – Jul 2023

Built and deployed a Smart AI-Based Ticket Classification System application with a REST-based backend. Implemented secure authentication and CRUD APIs using Node.js and Express. Optimized MongoDB schema design and indexing while maintaining version control using Git.

Machine Learning Intern — V3 Analytics

Jul 2024 – Sep 2024

Performed data preprocessing, feature engineering, and exploratory data analysis on structured datasets using Python. Built supervised and unsupervised models with Scikit-learn for predictive analysis. Improved model performance through systematic hyperparameter tuning and feature selection.

PROJECTS

Smart AI-Based Ticket Classification System — link

2025

Developed an NLP-based system using MERN and Python to automatically classify customer support tickets using Scikit-learn and XGBoost. Applied feature extraction and model optimization techniques to achieve **92% classification accuracy**. Deployed the solution with RESTful services using Node.js and Express, integrated MongoDB for data storage, and maintained Git-based version control.

Diabetes Risk Prediction System — link

2024

Built a machine learning-based system using Python and Scikit-learn to predict diabetes risk from medical input parameters. Trained and evaluated an SVM model achieving **72.77% accuracy** through effective feature engineering. Deployed an interactive Streamlit interface for real-time prediction and model evaluation.

Tourism Booking and Reservation Management System — link

2024

Developed a desktop-based booking application using Java and JavaFX for eco-tourism destinations, hotels, and resorts. Designed a MongoDB-backed data layer to manage bookings, user profiles, and availability. Structured the application using MVC architecture with complete CRUD functionality.

Gyromove – AI-Integrated Smart Wheelchair System

2023 – 2024

Developed an AI-powered assistive mobility system for quadriplegic patients using computer vision and deep learning techniques. Implemented real-time obstacle detection and adaptive navigation logic using OpenCV and TensorFlow. Enhanced user safety and independence through intelligent movement assistance in dynamic environments.

ACHIEVEMENTS

LeetCode Rating: 1632 — 300+ Problems Solved

CodeChef Rating: 826 — Global Rank 1590 — 90+ Problems Solved

1st Place — **Project LEAP** Competition (AI Smart Wheelchair)

SKILLS

Languages: Python, Java, JavaScript

Core CS: DSA, OOPS, DBMS, OS, Computer Networks

Full Stack: React, HTML, CSS, Node.js, Express.js, REST APIs, JWT

Databases: MySQL, MongoDB

Tools: Git, GitHub, Postman, Linux

CERTIFICATIONS

Introduction to Statistics — **Coursera**

2024

Full Stack Development (MERN) — **Better Tomorrow**

2023

Python Programming — **National Skill Development Corporation**

2023

Introduction to Generative AI — **Google Cloud**

2023

EDUCATION

Sri Eshwar College of Engineering

2022 – 2026

Bachelor of Engineering (B.E.) in Electronics and Communication Engineering — CGPA: 8.40
