INTERNSHIPS

Data Science Intern — Celebal Technologies

Jul 2024 – Aug 2024

Developed and deployed a Diabetes Prediction Web App using Streamlit to estimate diabetes risk from user medical inputs. Built an SVM model with Scikit-learn achieving 72.77% accuracy and enabled real-time predictions through an interactive UI. Hosted the application on Streamlit Cloud for seamless browser-based accessibility.

Machine Learning Intern — V3 Analytics

Jul 2025 – Sep 2025

Performed data preprocessing, feature engineering, and exploratory data analysis on structured datasets using Python. Built supervised and unsupervised models with Scikit-learn for predictive analysis. Improved model performance through systematic hyperparameter tuning and feature selection.

PROJECTS

Smart AI-Based Customer Support Ticket Classification System — link

2025

Developed an NLP-based system in Python to automatically classify customer support tickets using Scikit-learn and XGBoost. Applied feature extraction and model optimization techniques to achieve **92% classification accuracy**. Deployed the solution as FastAPI-based REST services with MongoDB for persistence and Git-based version control.

MindCare – Health Support Web Application — link

2025

Built a full-stack mental health support application using **Python, HTML, and CSS**, implementing modular backend logic and responsive frontend design. Applied **client-server architecture and scalable development practices** to ensure maintainable and efficient system performance. Demonstrated proficiency in **full-stack development, backend engineering, and Git-based version control** through structured project deployment.

Diabetes Risk Prediction System — link

2024

Built a machine learning-based system using Python and Scikit-learn to predict diabetes risk from medical input parameters. Trained and evaluated an SVM model achieving **72.77% accuracy** through effective feature engineering. Deployed an interactive Streamlit interface for real-time prediction and model evaluation.

Gyromove – AI-Integrated Smart Wheelchair System

2023 – 2024

Developed an AI-powered assistive mobility system for quadriplegic patients using computer vision and deep learning techniques. Implemented real-time obstacle detection and adaptive navigation logic using OpenCV and TensorFlow. Enhanced user safety and independence through intelligent movement assistance in dynamic environments.

ACHIEVEMENTS

LeetCode: 1632 Rating — 300+ Problems Solved — Profile

CodeChef: 826 Rating — Global Rank 1590 — 90+ Problems Solved — Profile

1st Place — **Project LEAP** Competition (AI Smart Wheelchair)

SKILLS

Programming: Python, Linux

Data Science & ML: Algorithms, Exploratory Data Analysis (EDA), DL, Neural Networks

Libraries & Frameworks: Hugging Face, LangChain, Scikit-learn, Pandas, NumPy, TensorFlow, OpenCV

Development & Tools: Streamlit, Flask, FastAPI, Git & GitHub, AWS

Databases: MySQL, MongoDB

CERTIFICATIONS

Introduction to Statistics — **Coursera**

2024

Machine Learning with Python — **Coursera**

2024

Python Programming — **National Skill Development Corporation**

2023

Introduction to Generative AI — **Google Cloud**

2023

EDUCATION

Sri Eshwar college of engineering, Coimbatore

2022 – 2026

Bachelor of Engineering (B.E.) in Electronics and Communication Engineering — CGPA: 8.40
